

Kool Tools

reinforcing powders that will allow you to repair almost anything. Uses :

Fig 14

Black powder to repair bumper, grilles, radiators, motorcycle fairings, electrical switches, door handles, dis-

Fig 15

Fig 16

tributor caps and so much more. You sprinkle a little of the reinforcing power on the area that you want to bond and then add the glue for an unbelievable adhesive joint. Kye repaired a trim panel fastener that has broken. See Fig 15 & 16

I checked it out after it had been repaired, and it was just like new (strength-wise). Available on Amazon.

The next item was not at SEMA 2017 (could not make the deadline for obtaining a booth at SEMA), but both Kye and I want to show it—a car dolly from Ajon. See Fig 17

Fig 17

Fig 18

What makes this system different is that it bolts to any frame rails (front or rear) and the double wheels articulate for moving a vehicle over uneven surfaces. See Fig 18 with a vehicle being loaded onto a flat bed truck. Contact John at 714-981-760.

The next tool from SEMA 2017 are the “Spring Tools”

Here are the specifics:

Fig 19

Fig 20

- Double-ended prick punch utilizes small cylinder for controlled slight indentation for spot marking; center punch utilizes large cylinder for maximum impact that creates deep indentation for drilling

- Hammerless action ensures accuracy and precision control for superior results

- 3,500 lb. of impact-striking force

- Outstanding precision and control while being safe and easy to use

Available from Amazon or company website (springtools.shptron.com).

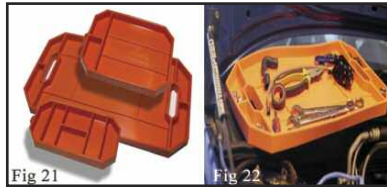

Fig 21

Fig 22

Next item is from GRYPMAT These material trays hold tools up to a 70 degree angle with no magnets. The high-friction material protects surfaces and tools alike. Works great when disassembling or reassembling a vehicle. Fig 23 is the Tape Caddy

Fig 23

from Collision Edge (<https://www.collisionedge.com>)

The Tape Thing is an exciting, patented MAGNETIC tool that sticks tape to booth walls, prep carts, tool boxes, or any other metal surfaces. Tape spools off easily from your hand too! Use this in conjunction with Collision Edge’s other product, The Tape Caddy, and keep everything a paint tech uses directly on the hip. They can be reached at 770-328-5666. The next kool tool is from Aria Tools.

Fig 24

These are stainless steel and can be rebuilt. They work on both industrial and automotive air fittings. They also have high flow for HVLP air guns. Aria Tools can be reached at 510-730-2584. See Fig 24.

As I was walking through the

aisle, the demo on the next item caught my eye. It is a rubber sleeve

re-grip. SLIP, ZIP, RE-GRIP. The simple way to add a grip to any handle! Fig 25

that fits on anything that has a handle. It is called Re-Grip. See Fig 25

Re-grip comes in three sizes and installs in less than a minute. It adds comfort and efficiency to any handled tool.

Fig 26

Fig 27

Here, I installed on one of my hammers. Available from Amazon.

A couple of years ago, I reviewed this dent pulling system from Prospot International. It uses low voltage to secure the pulling keys (very little burn-through on the back side). You are able to place the keys close to-

gether, whereas with the body pins, you can only use one at a time to pull. The body pins heat up the metal on the backside to over 1,600 degrees

Fig 28

Fahrenheit and will destroy any corrosion protection on the backside of the panel being repaired. DentFix manufactures a dent-pulling system called the “Maxi” that has been on the market for a number of years. See Fig 28

It has the pulling pins, wiggle wire and single pulling rod. A very

Fig 29

nice compact system, but has older technology and is not as efficient as
